gallus ECS 340

The perfect plug & play solution for your **gallus ECS 340**

MicroGap

The new adjustable anvil cylinder by Spilker

MicroGap

Now available to upgrade
your Gallus ECS 340

The reliable solution for the fine adjustment of the gap

With the MicroGap Spilker offers an absolutely reliable solution for the fine adjustment of the gap when cutting in the Gallus ECS 340. The gap can be precisely changed by fine adjustment in steps of 0,5 microns. The adjustment is made with one movement absolutely synchronously on machine side and operator side so that parallelism is always guaranteed.

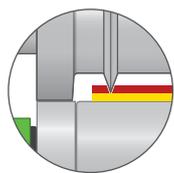

Direct exchange for the existing anvil cylinder

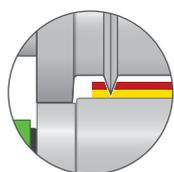

A retrofitting in the Gallus ECS 340 is possible thanks to the space-saving adjusting device of the MicroGap. If an adjustable anvil cylinder is already used in the machine, the installation can be realized without replacing the protective covers. If there is not yet an adjustable anvil in the machine, you will receive the MicroGap for an additional charge including customized protective covers as a conversion kit.

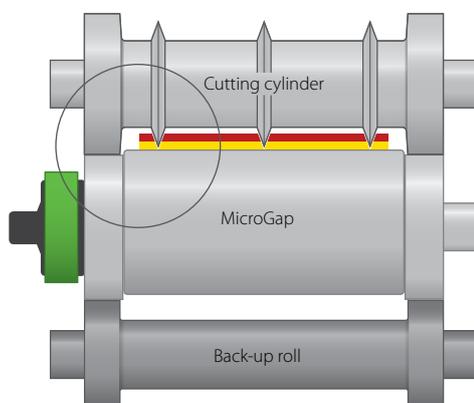

- position

0 position

+ position

During the fine adjustment the position of the bearers does not change so that there is no need to correct the contact pressure.

Your advantages

- Finest adjustment of the gap to adapt the cutting impression on the support material
- Compensation of different thicknesses of support material
- Longer life-time of your cutting tools
- Simple exchange with the existing anvil cylinder
- If necessary including customized protective covers as a conversion kit
- Maintenance-free – no oiling / lubricating necessary
- Cutting from the backside possible
