

SONIC-Control

Comfortable adjustment device for an easy and precise set up of the blow-off position

The SONIC-Control adjustment device for the precise set up of the blow off position, especially for SPILKER „SONIC „ rotary cutter tools with air control systems.

An additional adjustment screw shows the optimal angle on a scale and allows the operator to set up the angle into the same position, as before. SONIC-Control can be applied on any SONIC tool.

SONIC-Control allows setting up the blow-off position with an additional adjustment screw

Your Advantages

- Comfortable set up of the blow-off position for SONIC tools
- The angle is shown on a scale and can be read off precisely. The values can consequently be reproduced for repeat orders
- For bearing housings from 30 mm up to 80 mm, custom made executions possible
